2025 CROSS-CONNECTION SURVEY

Property Use

- Bare Lot Home

- Full-Time Resident
- Part-Time Resident

- Currently Building – Plan to Be Full-Time
- Currently Building – Plan to Be Part-Time
- Planning to Build

Cross-Connection Information: *A cross connection is a direct connection between any part of the public water supply system and a source of contamination or pollution. A garden hose is the most common form of cross connection. The hose is easily connected to the public water supply system and can be used to apply a variety of potentially dangerous substances, including chemicals and fertilizer. Other common cross connections include dishwashers, toilets, pressure washers, boilers, pools, and lawn sprinkler systems.*

What is a backflow prevention device? *Backflow prevention systems are devices installed onto a pipe that **allows water to flow only in one direction**. Think of it as a one-way gate that facilitates the water into your home's piping but prevents the water from flowing backward into the district's public water supply.*

Do you have a backflow prevention device installed on your property?

- Yes No Unsure

If yes, do you know the last time it was tested?

- Within the 12 months More than a year ago Not sure

Do You Have Any of the Following?

- Pool Spa/Hot Tub Pond Fountain Private Well
- Lawn/Garden Irrigation System Landscaped Areas with Automatic Sprinklers
- Other (please specify): _____

Your responses will help us maintain a safe and secure water supply.

Thank you for returning your form by August 30, 2025
